

# SOLVACID

TDS 03/16 en

## DEFINITION

Acid detergent-solvent stabilized and synergized, with double action film-remover and descaler.

## DESTINATION AND PERFORMANCE

**SOLVACID (GEAL)** is formulated for the deep cleaning of PORCELAIN TILES, both natural matt and polished, of ceramic tiles, clinker and other similar materials. Thanks to its double action solvent/acid it is highly efficient and fast in removing residues and stains of coloured grouts which result hard to clean with common acid detergents, due to the presence of resins and organic polymers. Also efficient in removing coloured clouds from absorbent or rough materials such as Terracotta tiles and natural Stone (a preliminary test is recommended).

Particularly on **polished / lapped Porcelain tiles** it makes easier the removal of stains deeply penetrated into micro-pores and resistant to ordinary cleaning. On **natural matt, unpolished, textured, glazed Porcelain tiles** and **Ceramic tiles** it removes dirt trapped in surface roughness.

## DIRECTIONS FOR USE

Apply **SOLVACID pure or diluted** (maximum 1 part with 2 of water) on stained surface, carefully covering the whole area. Let it work for a few minutes up to 30 minutes, then rub with medium-hard pad. Remove residue with a vacuum (suitable for liquids) or with clothes/sponges. Rinse with clean water. If necessary repeat after drying.

Indicative consumption: 1 litre for 10 - 20 sq.mt.
