

FUGA PULITA

DEFINITION

Strong alkali, water-soluble and emulsifying solvents solution, non-aggressive for joints and tiles.

USE AND PERFORMANCES

FUGA PULITA is a formula specifically dedicated to the cleaning of the joints darkened by dirt and trampling, in particular on ceramic and porcelain stoneware surfaces. It acts rapidly and allows removing easily organic, oily, and greasy substances deposited and anchored to the joints surface, and that cause their darkening and absorption of inorganic dirt and dust.

It brings the joints back to their original colour without altering or damaging the ceramic and joint surface since it does not contain acids. It can cause partial or total removal of the treatment if used on absorbent materials treated with resinous-waxy protective and finishing products. Preliminary tests on these materials are recommended.

USE MODALITY

FUGA PULITA is used pure. Spray the product on the joints to be cleaned and let it act for a few minutes, then rub with brush or abrasive sponge. Rinse abundantly with water, and repeat if necessary.

Indicative consumption: according to needs.
